

Managed Services for Compressors

Pacific Controls managed services help remotely monitor performance of key components of Air Compressors on a 24 X 7 basis and compare them with benchmarks to ensure that the equipment is operating at desired level. These components may include; pressure and temperature, lifetime and loaded hours, inlet filter, separator and fluid changes and alarm status, etc. With the help of Pacific Controls' remote monitoring service, the entire status of the system can be viewed at a glance, as well as detail of each system component can be visualized. This facilitates more convenient routine maintenance scheduling. The Service also allows the user to remotely adjust parameters such as load and unload pressure settings, drain intervals, unloaded stop time, and other factors. Utilizing Pacific Controls' GBOTs remote fault detection and diagnostics can be carried out facilitating rapidly addressing problems, if any.

Key Benefits

- Based on presented analytics, maintenance departments can schedule maintenance task that optimizes use of resources
- Proactive monitoring can help carry out maintenance, before any problem occurs
- Tracks energy consumption and provide necessary intelligence for making new equipment purchase decisions, keeping in view available rebates
- Minimizes chances of downtime
- Provide useful insight into equipment in operations, which help manufacturers improve products
- Enhances life of asset through proactive and predictive maintenance
- Provides the ability to remotely address certain problems, thereby saving costs.
