

Managed Services for Pumps

Pacific Control's Managed Services offer a cost-effective and straightforward way to monitor and manage pump installations in commercial buildings and in water supply and wastewater infrastructure. By undertaking, proactive monitoring and remote fault detection and diagnostics, it reduces the need for onsite inspection. Any deviations from benchmarks are identified, alarms are generated and actionable alarms are notified to relevant people on a timely basis. The service captures equipment performance data, which is analyzed and presented to maintenance service provider/OEMs. This data helps in carrying out proactive maintenance, while reducing the cost of aftermarket services.

Key Benefits

- Help ensure that equipment is operating at peak performance
- Optimize energy consumption
- Minimizes risk of emergency shutdowns due to mal performance of pumps
- Help in better managing service schedules
- Remote fault detection and diagnosis help reduce operating costs
- Provide useful business intelligence to manufacturers for product enhancements.
