

Managed Services for Waste Compression Machines

Pacific Control Managed Service for Waste Compressors and balers help optimize operations by enabling measurement of the accurate weight of the bales along with capturing the information such as geographical location of the machine. The service generates alarm notifications in case of weight overload or sub-optimal performance of the machine. The Information with respect to correct accounting of quantity of waste sent for recycling, tangible measurement of saved energy and labor, detailed reports and analysis of various kinds, historical usage pattern of machine etc. are very beneficial for the owner for enhanced operations.

Apart from the weight measurement and machine operation details, this solution also helps in protecting the environment. It reduces the carbon footprint of the industries by correctly and efficiently handling the waste generated by them. This eco-friendly solution makes use of pressure largely for compression of waste and very minimal use of electricity. The key features and benefits of the solution are listed below:

Key Benefits

- Facilitate accurate measurement of weight of compressed bales
- Correct accounting of quantity of waste sent for recycling
- Tangible measurement of saved energy
- Real Time information of machine operation help ensure that downtimes are minimized
- Reduced manual labour
- Reduced maintenance and operational costs
- Eco-friendly solution helps meet social responsibility goals
- View activity of any company's baler at any location, at any time
- Remotely set pick up request for specific number of bales made
- Facilitates alerts for preventative maintenance by analyzing performance with bench marks
- Generates detailed reports and analysis
